The following is a non-exhaustive list of agencies to contact for food product testing and analysis for regulatory compliance. Many operations complete pH, general food microbiology, and other tests, call each lab to inquire about the tests listed as there may be additional tests available since the last update of this publication.

The University of Massachusetts Extension seeks to connect stakeholders with the resources they need. The University of Massachusetts Extension does not preferentially endorse any of the following businesses; this list is simply a starting point.

If you know of a business that should be included in this list that is not please email amanda.kinchla [at] foodsci.umass.edu with “Website Resource Addition” in the Subject line.
